

## Firsthand Lexus LS430: Tips, Tricks, Tidbits

Joshua Landau of JML Audio in St. Louis, Mo., shares with us some ideas of where things can go in the seldom-seen (by installers) Lexus LS430.

Aftermarket integration is fairly simple, as the factory six-disc changer can be removed and replaced with a standard ISO mount aftermarket radio. Joshua notes that the aftermarket radio can mount with factory screw holes but the dash bezel needs to be widened slightly. Joshua

also notes that some motorized face radios may not fit properly. Another cool aspect is that the factory trim piece still flips up for a stealth look.

Here is a great place for a satellite radio controller in the sunglasses holder. The factory pocket will still flip up for a stealth look.

Here is a great place for a customer's iPod.

Here you can see a bunch of aftermarket equipment installed: Satellite radio controller up high, aftermarket head unit down low, and an iPod on the center console. Joshua also made some custom kick panels and a-pillar tweeter pods.

## Are you ready to take your skills to the next level?

Then it's time to come to Vegas

Tuesday, January 9, 2007  
Las Vegas Convention Center.

**FIRST**— Fuel your imagination in the largest consumer technology tradeshow with cutting-edge mobile electronics.

**THEN**— Take your skills to the next level by attending the 2007 International CES MECP Training Track.

Three training sessions will be held focusing on:

Factory installation using composite materials

Understanding the router, and making installation more profitable.

Make creations using fiberglass and more.

**COST**— \$99 in advance for all three sessions (\$199 on-site) for more information, visit [www.CESweb.org](http://www.CESweb.org)
